LEAVES YOUR KITCHEN FRESH & CLEAN

PLASMA AIR PURIFICATION TECHNOLOGY

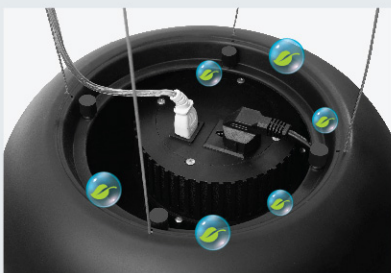

Plasmafresh™ – Revolutionary Technology

Plasmafresh™ air purification technology effectively eradicates 98% of odours, fumes, allergens, and pollutants, while efficiently filtering grease at an impressive rate of 95.7%

With Plasmafresh, your kitchen is ensured to always remain clean and fresh.

Intelligent Purification System

Plasmafresh™ purification is a technology that uses electricity to change the composition of molecules. The plasma filter creates a safe and small electric field, which efficiently charges pollutant molecules. These charged particles are effectively deodorised by the activated carbon filter. The purified air flows back into the room, providing clean and fresh air.

Less Maintenance vs Traditional Charcoal Filters

The activated carbon filter has a high degree of porosity and surface area. This prolongs the lifespan for at least 5 years with up to 4 hours of daily use. In contrast, traditional charcoal filters need replacement every 6 months or 1 year, depending on usage.

Remote Control (Option)

Remote control provides convenient access to on/off, speed adjustment, and lighting functions.

Sensor Touch Control

Touch control is extremely easy to use and indicates speed, light and delay timer.

Delay Timer

The cooker hood will switch off automatically at a preset time, so you can proceed with your meal after cooking is done. Meanwhile, the cooker hood will continue to extract the oily fumes, leaving a clean kitchen without smoke or pungent smells.

Metal Grease Filter

An essential component that filters out grease, smoke, and other airborne particles generated during cooking. This filter with magnet is easy to take apart and clean.
